Dear colleagues,

We hope this email finds you healthy and your business doing well.

ANNOUNCING the launch of the new website for our cloud-based central dispatch program:

www.ConcreteGo.com

Please navigate through the pages to find out more about the benefits of being in "the cloud", see testimonials and demo videos, use our savings calculator, and more! We hope you enjoy this new tool as much as we have in creating it.

ConcreteGo.com® is a central dispatch solution tailored for the ready-mix concrete and materials industry. ConcreteGo helps producers allocate resources effectively, improve operation efficiency and provide better customer care. Applying cloud-computing technology, ConcreteGo delivers all the functions and benefits of a dispatch system over a secure Internet site. It can reduce, or even eliminate the hassle of building and maintaining an IT infrastructure and complex private network previously necessary. ConcreteGo is simple to learn and use. All you need is a PC with broadband Internet access such as cable, Fios, DSL or a wireless Internet card.

We strive to provide a secure system and are constantly working to improve its function and capabilities. ConcreteGo.com now offers a couple of new optional features to enhance security.

We can restrict user accounts to login only from specific

computers or IP addresses. We're also designing a 2-step verification via landline or cell phone, available soon. If you are interested in learning more about any of these features, please let us know.

REMOTE BATCHING

It's now possible to use any Windows-compatible remote desktop control app. (LogMeIn, UltraVNC, VPN, etc.) to turn SYSDYNE's batching system into a fully functional remote batch system over the Internet! Our batching program is compatible with all Windows operating systems, including XP, Vista, and Windows 7.

Here are a few remote batch features under your control:

1. Automated belt control enables you to create a remote batch without extra help from a driver. You can still have the flexibility to start the belt manually by clicking the belt start button on the batch screen, or just put the belt control into the automated batch cycle.
2. A customized Emergency button on the batch screen will let you push the emergency button if something goes wrong. For example, if a truck is not in position to receive and the material drops to the ground, you can click the emergency button to hold the discharge, call the driver to fix the problem, then release the emergency button to finish the load.
3. What if you want to drop a couple hundred pounds of sand manually using the remote batch? A new feature called "material batch" will take care of that. Due to the latency of network data transmission, the action of clicking on the screen to open and close the bin gate will cause a delay on the response from the user interface. To remedy this delay, the "material batch" feature enables you to click on the material batch button, pick up the material, fill the quantity, and click the batch button, and the batching system will take care of the rest.

Overall, the simple design of SYSDYNE's batch system as well as the intuitive and clickable batch screen make it easy to create a remote batch. Almost all the functions are two mouse clicks away (at most), and SYSDYNE's 24/7 support team is only a phone call or email away.

COME VISIT SYSDYNE in sunny San Diego for the NRMCA ConcreteWorks conference on September 25-27.

Jill Zhang, President of SYSDYNE, will present an educational lecture on the "green" benefits of web-based central dispatch services. Learn how cloud-based services can reduce your company's carbon footprint and cut costs.

Booth #13 and lecture schedule between 2:45 - 4:15 PM.

ABOUT SYSDYNE:

Founded in 1976, Sysdyne develops, manufactures and supports batch-control systems and dispatch solutions for concrete producers in the U.S. and around the world. Sysdyne excels at providing simple, reliable, flexible and affordable products, and excellent customer service. Sysdyne leads the industry in its application of the newest cloud-computing technology to its central dispatch solution, ConcreteGo.com.
